

PowerStation_05-10-12
aka Charging Station

I have been collecting donated items, doing some design and some building.

Here is where the project is currently;

Needs paint and a top

Access cover removed (bats go inside)

Access cover

Power panel tunnel

End where Ground Fault Duplex goes

End where DC volt meter goes

Right Foot

Left Foot

Next thing planned is to do some painting. I am about out of OUTDOOR Latex. If someone has a partial gallon of exterior paint (Acrylic, latex, enamel) I would appreciate getting it to get the station ready for a top.

Some counter top pieces have been promised, should be getting them next week.

I found some 1 foot square marble tiles approx 3/8" thick for a \$1 each. Depending on the size of the top, we may be able to add the tiles on it to reduce the fire-from-battery damaging the Charging Station.

Only missing a few minor items and TWO major ones.

Hinges and material to make a waterproof cover for the Power Panel Tunnel.

TWO deep cycle 12v 80AH or larger batteries.
